

Calendar House Membership Association comments for meeting 20 July 2016.

- The rooms in both options “A” and “B” as shown on 15th June **appear** to be approaching the functional requirements, but despite frequent requests we still do not have access to the length and width dimensions of rooms. Please see the four documents presented at the 15th June meeting (attached to the Minutes) for detailed requirements and reasons.
- At the 18th May meeting it was requested that the two main entrance doors be separated and individually operated to avoid the massive influx of intemperate external air such as occurs in the old building. This was achieved in the drawings presented on 1 June but removed on the drawings presented on 15 July. This situation will make the Café area untenable in winter.
- The elevation for the 1 June option “A” floor plan shows the roof over the entry area extending over a significant external area. Recognition of this was one of the reasons for requesting that the café area be extended east to be in line with the east wall of the office area. Elevation data for the 15 July floor plans have not been seen, but putting expensive roofing over grassland should be avoided. Maybe the café wall should be moved out as previously suggested.
- KBE cost data is available for option “B” of 15 June. Similar option “A” data is needed before a sensible decision can be made on which option to pursue.
- KBE estimate shows athletic rubber flooring for fitness center. This is not acceptable for the aerobic studio for safety reasons. Letter from public regarding this issue.
- Also, flooring for classrooms carpet was suggested by all focus groups. We want to give the new center a warm feeling.
- Sinks not shown in exam room or crafts area.
